

Instructions for Telegram Setup

Use the Telegram messenger app for instant SMS alerts free of charge.

Available from the app store for mobile devices or alternatively use the desktop and/or the web version in your browser for computer use.

1. Click **Users** > Select User account > Click **edit user**
2. Copy telegram KEY, see example
3. Open your telegram app on your device
4. Search for Onlineguarding
5. Enter the KEY in point 2 & then send

The image shows a multi-step process for setting up Telegram alerts. It starts with a screenshot of the 'Online Guarding PREMIUM' web interface, specifically the 'Edit User' page for a user named 'admin'. The 'User Details' section contains several fields: Username (admin), Email (john@smith.com), Cellphone Number (0831231234), and Telegram Key (/s01t1). A red box highlights the Telegram Key field, with an arrow pointing to it and the text '2. Copy Key'. Below this is a screenshot of the Telegram app search interface, showing a search bar with 'onlin' entered and a search result for 'Onlineguarding' with the OG logo. To the right is a screenshot of a Telegram chat window with the contact name '/s01t1' and a purple profile picture with 'JS' on it. The chat input field is empty, and the 'SEND' button is visible.

Next setup Telegram alerts in the system;

1. Click **Client Profile** > **Telegram Alerts & Reports**.
2. Select **Manage Telegram-Alerts Points** or **Manage Telegram-Site Alerts**.
3. Set your alert preferences
